# TABLE OF CONTENTS

01

Putting the wrong  
key in a lock

02

Putting on  
mismatched socks  
or shoes

03

Forgetting where  
I put an object

04

Accidentally  
deleting files

05

Pressing restart button  
instead of shutdown

06

Turn off the water  
heater after using

# Putting the wrong key in a lock

- It's a common slip that can happen in our daily lives.
- It occurs when a person accidentally attempts to use the wrong key to unlock a door or padlock.
- Several factors can contribute to this type of slip, such as distraction or multitasking.

# Putting on mismatched socks or shoes

- It occurs when a person accidentally puts on socks or shoes that do not match.
- It happens when getting dressed or preparing to leave the house.
- There are several reasons why a person might put on mismatched socks or shoes such as limited time or be in a rush.

# Forgetting where I put an object

- Forgetting where I put an object, such as my keys or phone, is a common slip.
- It can happen when I am distracted, in a hurry, or not paying attention.
- Misplacing objects can cause frustration, stress, and inconvenience.

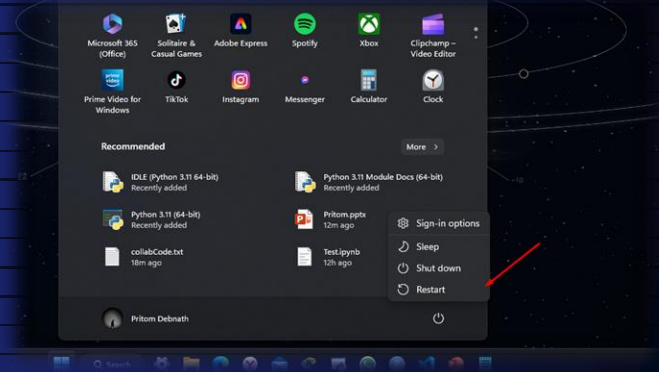

# Accidentally deleting files

- Accidentally deleting files is a slip that can happen.
- It can occur when a person is not careful or when technology malfunctions.
- This slip can cause frustration if the data or files are important or difficult to replace.

# Pressing restart button instead of shutdown

- A common slip which most of the computer user faces.
- Clicking restart will shutdown the computer completely and then again turn it on.
- As these two option are placed close humans do this error.

# Turn off the water heater .....

- A common slip which I have to face most of the time is turning off the water heater.
- As it takes a bit time to properly heat the water, as time passes after using I forget to turn off.
- It can damage a lot in the water supply of the house.

Thank You
